Introduction To
Boosting
Boosting is a general

method for improving the accuracy of any given learning algorithm. This short overview paper introduces the boosting algorithm AdaBoost, and explains the underlying theory of boosting, including an explanation of why boosting often does not suffer from

overtting as well as boosting's relationship to support-vector machines.

A Short Introduction to Boosting
This short overview paper introduces the boosting algorithm AdaBoost, and explains the un-derlying theory of boosting, including an

explanation of why boosting often does not suffer from over?tting as well as boosting's relationship to support-vector machines. Some examples of recent applications of boosting are also described.

A Short Introduction to Boosting -

Boosting is a general method for improving the accuracy of any given learning algorithm. This short overview paper introduces the boosting algorithm AdaBoost, and explains the underlying theory of boosting, including an explanation of why

boosting often does not suffer from overfitting as well as boosting's relationship to support-vector machines.

Boosting

A Short Introduction to Boosting
AdaBoost is easy to implement, and the only meta-parameter that needs tuning is the number of boosting rounds T. It is flexible with any choice of weak learner, though simple weak learners tend to

have computational
benefits. Boosting can
identify outliers: they
are simply the
datapoints with higher
weights.

CiteSeerX — A Short Introduction to Boosting
Background Boosting has its roots in a theoretical framework for studying machine learning called the "PAC" learning model, due to Valiant [46]; see Kearns and

Vazirani [32] for a good introduction to this model. Kearns and Valiant [30, 31] were the first to pose the question of whether a "weak" learning algorithm which performs just slightly better than random guessing in the PAC model can be ...

Learning to rank refers to machine learning techniques for training the model in a ranking task. Learning to rank is

useful for many applications in Information Retrieval, Natural Language Processing, and Data Mining. Intensive studies have been conducted on the problem and significant progress has been made[1],[2]. This short paper gives an introduction to learning to rank, and it
