Are you at risk of being trapped in an uncompetitive business? Chances are the strategies that worked well for you even a few years ago no longer deliver the results you need. Dramatic changes in business have unearthed a major gap between traditional approaches to strategy and the way the real world works now. In short, strategy is stuck. Most leaders are using frameworks that were designed for a different era of business and based on a single dominant idea—that the purpose of strategy is to achieve a sustainable competitive advantage. Once the premise on which all strategies were built, this idea is increasingly irrelevant. Now, Columbia Business School professor and globally recognized strategy expert Rita Gunther McGrath argues that it's time to go beyond the very concept of sustainable competitive advantage. Instead, organizations need to forge a new path to winning: capturing opportunities fast, exploiting them decisively, and moving on even before they are exhausted. She shows how to do this with a new set of practices based on the notion of transient competitive advantage. This book serves as a new playbook for strategy, one based on updated assumptions about how the world works, and shows how some of the world's most successful companies use this method to compete and win today. Filled with compelling examples from "growth outlier" firms such as Fujifilm, Cognizant Technology Solutions, Infosys, Yahoo! Japan, and Atmos Energy, *The End of Competitive Advantage* is your guide to renewed success and profitable growth in an economy increasingly defined by transient advantage.

How does one distinguish between European Union investments that improve welfare and those that create economic malaise? *Funding the Greek Crisis: The European Union, Cohesion Policies, and the Great Recession* explores the sources of the Greek Crisis that lie primarily in EU policies that appeared to have worked better for other countries but not for Greece. Without overly simplifying the Greek condition, it provides insights into policies the countries of the euro area may need to implement in order to ensure collective cohesion and individual success. Arguing that EU preferences for autonomous investments discouraged organic development with lasting implications, *Funding the Greek Crisis* sheds new light on the nature of regional competitiveness and public economics. Encompasses public economics, macroeconomics, international trade, competitiveness, microeconomics and regional development studies Sheds light on key policies that affect millions of EU citizens Examines Solow's growth model Provides a different way of explaining growth from real business cycle theory

A revolutionary new argument from eminent Yale Law professor Daniel Markovits attacking the false promise of meritocracy It is an axiom of American life that advantage should be earned through ability and effort. Even as the country divides itself at every turn, the meritocratic ideal - that social and economic rewards should follow achievement rather than breeding - reigns supreme. Both Democrats and Republicans insistently repeat meritocratic notions. Meritocracy cuts to the heart of who we are. It sustains the American dream. But what if, both up and down the social ladder, meritocracy is a sham? Today, meritocracy has become exactly what it was conceived to resist: a mechanism for the concentration and dynastic transmission of wealth and privilege across generations. Upward mobility has become a fantasy, and the embattled middle classes are now more likely to sink into the working poor than to rise into the professional elite. At the same time, meritocracy now ensnares even those who manage to claw their way to the top, requiring rich adults to work with crushing intensity, exploiting their expensive educations in order to extract a return. All this is not the result of deviations or retreats from meritocracy but rather stems directly from meritocracy's successes. This is the radical argument that Daniel Markovits prosecutes with rare force. Markovits is well placed to expose the sham of meritocracy. Having spent his life at elite universities, he knows from the inside the corrosive system we are trapped within. Markovits also knows that, if we understand that meritocratic inequality produces near-universal harm, we can cure it. When *The Meritocracy Trap* reveals the inner workings of the meritocratic machine, it also illuminates the first steps outward, towards a new world that might once again afford dignity and prosperity to the American people.

For decades, the public company has played a dominant role in the American economy. Since the middle of the 20th century, the nature of the public company has changed considerably. The transformation has been a fascinating one, marked by scandals, political controversy, wide swings in investor and public sentiment, mismanagement, entrepreneurial verve, noisy corporate "raiders" and various other larger-than-life personalities. Nevertheless, amidst a voluminous literature on corporations, a systematic historical analysis of the changes that have occurred is lacking. *The Public Company Transformed* correspondingly analyzes how the public company has been recast from the mid-20th century through to the present day, with particular emphasis on senior corporate executives and the constraints affecting the choices available to them. The chronological point of departure is the managerial capitalism era, which prevailed in large American corporations following World War II. The book explores managerial capitalism's rise, its 1950s and 1960s heyday, and its fall in the 1970s and 1980s. It describes the American public companies and executives that enjoyed prosperity during the 1990s, and the reversal of fortunes in the 2000s precipitated by corporate scandals and the financial crisis of 2008. The book also

considers the regulation of public companies in detail, and discusses developments in shareholder activism, company boards, chief executives, and concerns about oligopoly. The volume concludes by offering conjectures on the future of the public corporation, and suggests that predictions of the demise of the public company have been exaggerated.

Fourteenth in a series of annual reports comparing business regulation in 190 economies, *Doing Business 2017* measures aspects of regulation affecting 10 areas of everyday business activity: • Starting a business • Dealing with construction permits • Getting electricity • Registering property • Getting credit • Protecting minority investors • Paying taxes • Trading across borders • Enforcing contracts • Resolving insolvency These areas are included in the distance to frontier score and ease of doing business ranking. *Doing Business* also measures features of labor market regulation, which is not included in these two measures. This year's report introduces major improvements by expanding the paying taxes indicators to cover postfiling processes—tax audits, tax refunds and tax appeals—and presents analysis of pilot data on selling to the government which measures public procurement regulations. Also for the first time this year *Doing Business* collects data on Somalia, bringing the total number of economies covered to 190. Using the data originally developed by *Women, Business and the Law*, this year for the first time *Doing Business* adds a gender component to three indicators—starting a business, registering property, and enforcing contracts—and finds that those economies which limit women's access in these areas have fewer women working in the private sector both as employers and employees. The report updates all indicators as of June 1, 2016, ranks economies on their overall “ease of doing business”, and analyzes reforms to business regulation † identifying which economies are strengthening their business environment the most. *Doing Business* illustrates how reforms in business regulations are being used to analyze economic outcomes for domestic entrepreneurs and for the wider economy. It is a flagship product produced in partnership by the World Bank Group that garners worldwide attention on regulatory barriers to entrepreneurship. More than 137 economies have used the *Doing Business* indicators to shape reform agendas and monitor improvements on the ground. In addition, the *Doing Business* data has generated over 2,182 articles in peer-reviewed academic journals since its inception.

Although Chinese and global demand, low commodity prices and rising wages will continue to challenge trade growth in 2016, Indonesia remains on a positive trajectory. Rising domestic demand, increasing liberalization measures, improvements to the investment climate and a shift towards value-added production will bolster both exports and investment. At the same time, new trade agreements with the world's largest economies look set to drive long-term trade expansion. Prudent government policy, an ambitious reform agenda and rising recognition of the role of the private sector should help to keep investment and trade stable in 2016, and despite exports and growth have dipped in recent years, the country is well positioned to make the crucible transformation from a consumption- to investment-based economy.
