Crabs often show marked sexual dimorphism.Males often have larger claws, a tendency that is particularly pronounced in the fiddler crabs of the genus Uca ().In fiddler crabs, males have one greatly enlarged claw used for communication, particularly for attracting a mate. Another conspicuous difference is the form of the pleon (); in most male crabs, this is narrow and triangular in form, while ...

Crab - Wikipedia

" Crabs " is the common term for lice found in the pubic hair of humans. Crabs is a parasite infection medically known as Pediculosis pubis or pubic lice. Barely the size of a pinhead, lice are organisms that live only with the help of another organism, called a host.

Crabs (Pubic Lice) Pictures, Symptoms, Treatment, Cure

Crabs will climb into your trap in search of the bait. Simply retrieve the trap and collect your crabs. Please note that there are certain rules you must follow when setting non-collapsible crab pots. Crab Pot Rules. 1. If a pot is marked with a buoy it must be clearly visible and attached to the pot with sinking line.

Crabbing in NY - NYS Dept. of Environmental Conservation

Crab, any short-tailed member of the crustacean order Decapoda (phylum Arthropoda)—especially the brachyurans (infraorder Brachyura), or true crabs, but also other forms such as the anomurans (suborder Anomura), which include the hermit crabs. Decapods occur in all oceans, in fresh water, and on land; about 10,000 species have been described.

Crab | crustacean | Britannica

Crabs are like Charles Darwin’s isolated Galapagos Islands groups, but they formed spontaneously instead of being evolutionarily fenced in. It’s not just superficial shape that unifies the five...

Crabs and Convergent Evolution: Carcinization Explained

Pubic lice, commonly called crabs, are tiny insects found in your genital area. They are a different type of louse from head lice and body lice. Measuring 1/16 inch (1.6 millimeters) or less, pubic lice received their nickname because their bodies resemble tiny crabs. The most common way to acquire pubic lice is through sexual intercourse.

Pubic lice (crabs) - Symptoms and causes - Mayo Clinic

The crab louse or pubic louse (Pthirus pubis) is an insect that is an obligate ectoparasite of humans, feeding exclusively on blood. The crab louse usually is found in the person’s pubic hair. Although the louse cannot jump, it can also live in other areas of the body that are covered with coarse hair, such as the eyelashes.

Crab louse - Wikipedia

Pubic lice — also known as crabs — are small parasites that attach to the skin and hair near your genitals. Crabs aren’t dangerous, and they’re usually pretty easy to get rid of. Want to get tested for pubic lice? Find a Health Center
