Development of the Modern Freezer. chevrons-left. Prev NEXT. Bacteria are usually the cause of food decay, but they can't grow as well or at all in freezing temperatures, which are at 32 degrees Fahrenheit (0 degrees Celsius) or lower. So, food spoils more slowly if you lower the liquid inside it -- the water molecules -- to freezing temperatures. As scientists in the early 1800s made related discoveries about the nature of temperature and the laws of thermodynamics, it was then that the ...
