ODFW Hatchery Genetic Management Plans  
Genetic modification is conducted in some hatcheries to improve the quality and yield of farmed species. Artificial fertilisation facilitates selective breeding programs which aim to improve production characteristics such as growth rate, disease resistance, survival, colour, increased fecundity and/or lower age of maturation. [7]

---

Fish hatchery - Wikipedia  
The hatchery produces an average of 1.5 million fish annually for stocking into public waters throughout Arkansas. Cultured fish are stocked to fulfill management program requests by fisheries biologists. Most fish are harvested from production ponds as fingerlings and transported to waters across Arkansas in state-of-the-art fish transport trucks.
