Hp Load Runner Function Reference Guide

LoadRunner Professional reproduces real business processes. Scripts can be easily modified to emulate real user behavior. It emulates hundreds or thousands of concurrent virtual users, (with minimal hardware), to apply accurate workloads to any application and capture end-user response times for business processes and transactions, ensuring that applications meet requirements.

LoadRunner: Application Load Testing Tools | Micro Focus

LoadRunner is a software testing tool from Micro Focus. It is used to test applications, measuring system behaviour and performance under load. LoadRunner can simulate thousands of users concurrently using application software, recording and later analyzing the performance of key components of the application. LoadRunner simulates user activity by generating messages between application components or by simulating interactions with the user interface such as keypresses or mouse movements.
