Methods for new
mobile experiences,
from concept creation
to prototyping to
commercialization.

The mobile device is

Get Free Motorola

changing the ways we interact with each other and with the world. The mobile experience is distinct from the desktop or laptop experience; mobile apps require a significantly different design philosophy as well as design methods that reflect the unique experience of computing in the

Get Free Motorola

world. This book
presents an approach
to designing mobile
media that takes
advantage of the
Internet-connected,
context-aware, and
media-sharing
capabilities of mobile
devices. It introduces
tools that can be used
at every stage of
building a mobile
application, from

Get Free Motorola

concept creation to commercialization, as well as real-world examples from industry and academia. The methods outlined apply user-centered design processes to mobile devices in a way that makes these methods relevant to the mobile experience—which

Get Free Motorola

involves the use of systems in the complex spatial and social world rather than at a desk. The book shows how each project begins with generative research into the practices and desires of a diverse set of potential users, which grounds research and design in the real world. It

Get Free Motorola

then describes methods for rapid prototyping, usability evaluation, field testing, and scaling up solutions in order to bring a product to market. Building Mobile Experiences grew out of an MIT course in communicating with mobile technology; it is appropriate for

classroom use and as
a reference for mobile
app designers.

"Leonardo da Vinci
was a brilliant artist,
scientist, engineer,
mathematician,
architect, inventor,
writer, and even
musician--the
archetypal
Renaissance man. But

Get Free Motorola

he was also, Fritjof Capra argues, a profoundly modern man. Not only did Leonardo invent the empirical scientific method over a century before Galileo and Francis Bacon, but Capra's decade-long study of Leonardo's fabled notebooks reveal him as a systems thinker

centuries before the term was coined. He believed the key to truly understanding the world was in perceiving the connections between phenomena and the larger patterns formed by those relationships. This is precisely the kind of holistic approach the complex problems we

Get Free Motorola

face today demand.

Capra describes seven
defining

characteristics of
Leonardo da Vinci's
genius and includes a
list of over forty
discoveries Leonardo
made that weren't
rediscovered until
centuries later.

Leonardo pioneered
entire fields--fluid
dynamics, theoretical

botany,
aerodynamics,
embryology. Capra's

overview of

Leonardo's thought

follows the

organizational

scheme Leonardo

himself intended to

use if he ever

published his

notebooks. So in a

sense, this is

Leonardo's science as

Get Free Motorola

he himself would have presented it. Leonardo da Vinci saw the world as a dynamic, integrated whole, so he always applied concepts from one area to illuminate problems in another. For example, his studies of the movement of water informed his ideas about how

landscapes are
shaped, how sap rises
in plants, how air

moves over a bird's

wing, and how blood

flows in the human

body. His

observations of

nature enhanced his

art, his drawings were

integral to his

scientific studies, and

he brought art and

science together in

his extraordinarily beautiful and elegant mechanical and architectural designs. Obviously, we can't all be geniuses on the scale of Leonardo da Vinci. But by exploring the mind of the preeminent Renaissance genius, we can gain profound insights into how best to address the
