This book supports students preparing for the OCR GCSE exam. The practice papers in the book are carefully modelled after past papers and specifications of exam board to ensure that the papers as a whole provide a rich and varied practice to meet all requirements of GCSE mathematics with an appropriate difficulty. Papers are designed to teach students the most easily applicable, reusable and fastest solutions to typical problems, and utilise problems which target areas of maths which students typically forget under the pressure of an exam. Solutions provided have been reviewed by many students to ensure that they are easily understandable while being the fastest and most re-applicable.

The aim of this book is a simple one; it does not intend to swamp through the deepest and obscurest parts of OCR's FP2 syllabus nor does it give you a brief overview, this book aims to cement your understanding in the very core of each topic allowing you to become more confident with the module as a whole. Although FP2 can seem incredibly daunting at first, knowing the basics inside and out can ensure you enter the exam with some guaranteed marks. How to use the book is completely up to you; you may use the book in line with a more in depth textbook using it to clarify any obscure points, you may choose to use the book for revision or even as a quick reference for when you get stuck on a practice paper. The book does not contain any specific exercises for you to practice as these can easily be found in other books or in past papers. Instead it shows you a clear and concise method to solve the example questions. Ultimately I wrote this book for those who have thrown themselves into further maths!
