In a sweet market that is all about the tiny details, Royce" Confect, started in 1983, is now one of Japan's most beloved chocolatiers ... and a Q&A with Simon Spurr. Our quest to discover the ...

A scientific study explains to the general reader the step-by-step manner by which cancers originate and spread, covering the process that takes place between the time a mutation occurs and a full-blown cancer develops.

Annotation. This book constitutes the refereed proceedings of the 9th International Conference on Intelligent Data Analysis, IDA 2010, held in Tucson, AZ, USA in May 2010. The 21 revised papers presented together with 2 invited papers were carefully reviewed and selected from more than 40 submissions. All current aspects of intelligent data analysis are addressed, particularly intelligent support for modeling and analyzing complex, dynamical systems. Topics covered are end-to-end software systems; modeling complex systems such as gene regulatory networks, economic systems, ecological systems, resources such as water, and dynamical social systems such as online communities; and robustness, scaling properties and other usability issues.

With the fascinating scholarship of The Emperor of All Maladies and the deeply personal experience of When Breath Becomes Air, a world-class oncologist examines the current state of cancer and its devastating impact on the individuals it affects -- including herself. In The First Cell, Azra Raza offers a searing account of how both medicine and our society (mis)treats cancer, how we can do better, and why we must. A lyrical journey from hope to despair and back again, The First Cell explores cancer from every angle: medical, scientific, cultural, and personal. Indeed, Raza describes how she bore the terrible burden of being her own husband's oncologist as he succumbed to leukemia. Like When Breath Becomes Air, The First Cell is no ordinary book of medicine, but a book of wisdom and grace by an author who has devoted her life to making the unbearable easier to bear.

This volume contains the proceedings of the AMS-IMS-SIAM Joint Summer Research Conference on Modeling the Dynamics of Human Diseases: Emerging Paradigms and Challenges, held in Snowbird, Utah, July 17-21, 2005. The goal of the conference was to bring together leading and upcoming researchers to discuss the latest advances and challenges associated with the modeling of the dynamics of emerging and re-emerging diseases, and to explore various control strategies. The articles included in this book are devoted to some of the significant recent advances, trends, and challenges associated with the mathematical modeling and analysis of the dynamics and control of some diseases of public health importance. In addition to illustrating many of the diverse prevailing epidemiological challenges, together with the diversity of mathematical approaches needed to address them, this book provides insights on a number of topical modeling issues such as the modeling and control of mosquito-borne diseases, respiratory diseases, animal diseases (such as foot-and-mouth disease), cancer and tumor growth modeling, influenza, HIV, HPV, rotavirus, etc. This book also touches upon other important topics such as the use of modeling in homeland security and some review and new results on various modeling paradigms including network, stochastic and deterministic formulations together with the use of optimal control and related methods for evaluating control strategies.

The bestselling author of Critical Mass offers a cutting-edge examination of what it means to be human in the face of the latest technical developments and research in cell biology, tissue growth, organ regeneration, and treatments of cancer and dementia.

This gripping narrative explores today's scientific pursuit of immortality, with exclusive visits inside Silicon Valley labs and interviews with the visionaries who believe we will soon crack into the aging process and cure death. We live in an age when billionaires are betting their fortunes on laboratory advances to prove aging unnecessary and death a disease that can be cured. Researchers are delving into the mysteries of stem cells and the human genome, discovering what it means to grow old and how to keep those processes from happening. This isn't science fiction; it's real, it's serious, and it's on track to revolutionize our definitions of life and mortality. In Immortality, Inc., veteran science journalist Chip Walter gains exclusive access to the champions of this radical cause, delivering a book that brings together for the first time the visions of molecular biologist and Apple chairman Arthur Levinson, genomics entrepreneur Craig Venter, futurist Ray Kurzweil, rejuvenation trailblazer Aubrey de Grey, and stem cell expert Robert Hariri. Along the way, Walter weaves in fascinating conversations about life, death, aging, and the future of the human race.

This title seeks to change the way we think about hypochondria and to use hypochondria to sharpen our thinking about health care. The book's four parts examine hypochondria as a condition of biology; of medicine; of culture; and of narrative.

This title is directed primarily towards health care professionals outside of the United States. Haematological oncology is a rapidly advancing and exciting field of medicine and this is the first British textbook addressing haematological oncology written specifically for nurses. The second edition of this successful text has been fully revised and updated throughout in line with recent developments in clinical practice. There are seven new chapters and expanded sections on bone marrow transplant, the immune system and palliative care. Comprehensive coverage of nursing issues in hematological malignancies providing everything a newcomer will need to know Addresses the role of chemotherapy, radiotherapy, and blood marrow transplant treatments in haematological oncology to enable effective management of patients Discusses pertinent daily issues for practicing nurses including oral care, nausea and vomiting, nutrition, infection control, social and psychological issues Reflection points provide an active reading experience and illuminate ideas and issues within the text Six new chapters: Research Priorities; Leadership Issues for Specialist Nurses; Fatigue; Adolescent Issues; Addressing the Needs of Families; Immune Modulators and Novel Therapies Expanded information on bone marrow transplant, the immune system and palliative care Improved design and layout New expert contributors to provide the latest information on their field

Accompanying CD-ROM contains ... "figures from text--in PowerPoint and JPEG formats; supplementary sidebars; mini-lectures; movies."--CD-ROM label.
