A mineral, by definition, must meet four criteria. It must: be a naturally occurring substance, be a solid substance, have an internal crystal structure and have been formed by inorganic processes (in other words, it cannot be formed by an organism). A rock, by comparison, is composed of one or more minerals or organic material (such as coal).

Demonstrates simple methods for identifying minerals, and describes their chemical and physical properties, occurrence, use, and history

Describes hundreds of minerals and lists their geographic distribution, physical properties, chemical composition, and crystalline structure

É Home educator Laura Berquist presents a modern curriculum based on the time-tested philosophy of the classical Trivium Ñ grammar, logic and rhetoric. She has given homeschoolers a valuable tool for putting together a "liberal arts" curriculum that feeds the soul, as well as the intellect. Her approach, covering grades K - 12, is detailed and practical, and it is adaptable by parents and teachers to any situation. This third revised edition includes a much expanded section for a high school curriculum, and an updated list of resources for all grades.

From Edward E. Chatelain (Valdosta State University, Georgia), this study guide helps students review and master the key ideas from every chapter through labeling exercises, Chapter Reviews with matching statements, plus Practice Tests and Challenge Tests that consist of multiple-choice, true/false, matching, and short-essay questions.
