Few concepts in social theory have been used so extravagantly in recent years as the notion of power. Yet, despite its inflated presence, the term is still unclear and under-theorized. In *The Circular Structure of Power*, Torben Dyrberg rises to the challenge of conceptualizing power through a philosophical examination of its uses in contemporary social theory. Drawing on the insights of Michel Foucault, Ernesto Laclau and Chantal Mouffe, Dyrberg brings this continental tradition into a creative dialogue with the Anglo-American tradition represented by figures such as Steven Lukes, William Connolly, Peter Bachrach and Morton Baratz. Moreover, Dyrberg moves from such abstract considerations to their implications for political and democratic theory through an examination of the work of thinkers as diverse as Robert Dahl, John Rawls, Jürgen Habermas and Nicos Poulantzas. Simultaneously engaging with and defying many of the dominant definitions of power, Torben Dyrberg destabilizes and undermines the conventional distinctions and polarities through which power is usually understood. The new perspective offered to us by this investigation is one which goes beyond the assumption that power can be based on and derived from either agency or structure, as if these categories were not somehow constituted by power.

Emancipation(s) addresses the question of how the changes of the last decade, together with the transformation in contemporary thought, have altered the classical notion of 'emancipation' as formulated since the Enlightenment.

Foucault saw the notion of parrhesia (truth-telling) as the most important factor for how governments could and should communicate with their people and vice versa. This important collection compiles and analyses Foucault's views on parrhesia to shed new light on his ideas on the importance of truth-telling in democracies.

This book outlines significant traits of radical leftist identity politics. In this type of discourse, arguments are organized around global friend/enemy schemes in ways that are at odds with the right/left matrix of democracy. This is shown by combining discourse analysis of how leftist critics argue in public debates centred on their reactions to the Charlie Hebdo massacre in 2015 and theoretical discussions on leftist identity politics orbiting around Schmitt, Marcuse and Mouffe. It is argued that the friend/enemy approach sacrifices the egalitarian and libertarian core values of the Left, leading it to adopt positions used to brand the reactionary Right. It also holds that leftist identity politics undermines democracy by moralizing enmity and stigmatizing dissent, and by promoting an elitist and relativist agenda. Against this background, the book looks at the nature of the right/left distinction and its political functions in modern democracy. This is further elaborated in relation to the works of Foucault and Rawls' analyses of parrhesia (free speech) and public reason, which provide a more fruitful approach to right/left and democracy than

those based on enmity. For Foucault and Rawls, a vibrant pluralist democracy relies on the autonomy of politics, which secures a space in which citizens are free and equal, which is crucial for free speech and assembly. They focus on issues related to the autonomy of politics and the freestanding nature of public reason; right/left as lateral political orientation coupled with fairness as political justification and the links between regime form and political community as decisive for democracy.

Reexamines the normative justification for democratic politics.

Understanding Organization Through Culture and Structure: Relational and Other Lessons From the African American Organization presents an innovative view of organizations and the communication processes that constitute them. Arguing that human beings are communicatively embedded in their cultures, Anne Maydan Nicotera and Marcia J. Clinkscales, working with Felicia R. Walker, examine issues concerning task and relational orientations and the ways they and other cultural dimensions connect with organizational structure and function for predominantly African American organizations. Utilizing the results of their own research on organizations, they develop a set of humanistically-based models that illustrate how hidden cultural processes suffuse organizational life and are manifest through communication. Emphasizing the development of alternative theories and models of organizing which are rooted in African-American culture, such as team-based versus hierarchy-based interactions, this book explores such organizational functions as leadership and management, power, authority and control, communication and interpersonal dynamics, and cultural

identity and human development. Applying their findings in a broader analysis of contemporary practices in organizational restructuring, the authors present research that serves as the foundation for generating several emergent models with significant implications for organizational systems. Understanding Organization Through Culture and Structure stimulates and inspires current researchers of organizational communication, and is certain to raise greater awareness of the operation of culture in organizing. The text is intended for scholars and students in organizational communication, management, organizational psychology, African studies, and related areas.

This book includes the original, peer-reviewed research papers from the 9th Frontier Academic Forum of Electrical Engineering (FAFEE 2020), held in Xi ' an, China, in August 2020. It gathers the latest research, innovations, and applications in the fields of Electrical Engineering. The topics it covers including electrical materials and equipment, electrical energy storage and device, power electronics and drives, new energy electric power system equipment, IntelliSense and intelligent equipment, biological electromagnetism and its applications, and insulation and discharge computation for power equipment. Given its scope, the book benefits all researchers, engineers, and graduate students who want to learn about cutting-edge advances in Electrical Engineering.

Surface waveguides radiate energy at bends. The asymptotic problem of solving for the radiated power and the radiation pattern for large radius of bend have been studied theoretically for the slab waveguide and for the circular cylindrical waveguide. The slab configuration

consists of two semi-infinite slabs joined by a circular bend. The cylindrical configuration consists of two straight circular cylinders joined by a circular bend. The results indicate that the discontinuities at the transitions between the straight sections and the bend cause the radiation to differ significantly from the radiation of a bend of the same size but being part of a uniform circular structure rather than being joined to two straight sections. The radiated power for both the slab and circular cylinder configurations is found to vary inversely as the square of the radius of curvature, and the radiation pattern is composed of many closely spaced narrow lobes. As the radius of curvature of the bend increases the lobes become more numerous and more closely spaced. The results can be extended for use to calculate approximate power loss due to radiation from bends in open waveguides in close proximity to the earth. (Author).

Many practice-based researchers have expert knowledge of doing research but often experience difficulties when writing it up and communicating the significance of what they have done. This book aims to help bridge the gap. Packed with practical advice and strong theoretical resources it takes you through the basics of designing and producing your text so that it will meet established standards and high quality assurance expectations.
