My definition is as follows: "A sustainable site plan has the least environmental impact while still meeting the client's project goals." It's not sustainable if it only parks half the cars that the project needs and costs twice as much as the budgeted amount. Just like any other design, sustainable design must fit within the typical project parameters and must also consider the environmental impacts. Site Selection

Many municipalities across the nation have embraced LID due to its holistic approach to site design and overall sustainable design. There are countless examples of jurisdictions that have proactively revised their development policies, codes, growth and management plans and implemented LID technologies to manage storm water at its source and collect rainwater for secondary use.

~~Achieving Sustainable Site Design through Low Impact ...~~

Sustainable Interior Design can be incorporated through various techniques: water efficiency, energy efficiency, using non-toxic, sustainable or recycled materials, using manufactured processes and producing products with more energy efficiency, building longer lasting and better functioning products, designing reusable and recyclable products, following the sustainable design standards and guidelines, and more.

~~Sustainable design - Wikipedia~~

Sustainable design refers to the design process that integrates an environmentally friendly approach and considers nature resources as part of the design. Sharlyn Underwood, American Society of Interior Designers (ASID) Virginia chapter president and interior designer with SmithLewis Architecture, defines sustainable design in the architectural sector this way: "Sustainable design is the practice of designing buildings so that they exist in harmony with natural systems."

~~Principles of Sustainable Design~~

Sustainable Design Sustainable design seeks to reduce negative impacts on the environment, and the health and comfort of building occupants, thereby improving building performance. The basic objectives of sustainability are to reduce consumption of non-renewable resources, minimize waste, and create healthy, productive environments.
