Harley's head-bolt torque method harkens back to a time when torque specifications were less scientific. Minton explains that the procedure requires the use of a torque wrench but not for final tightening. First, you should pre-load the bolts to about 16 foot-pounds. Then, with a pencil, make a witness mark on both the cylinder head and head bolt.

There is a verified problem with Harley-Davidson Big Twin compensating sprockets. The compensating sprocket buffers torque from the engine and the limitations with this part may be most obvious in newer, big bore engines. A part that was adequate in an 82-cubic-inch engine may not be adequate in a 103-cubic-inch engine. Harley has not issued a recall.
