Xerox's Origins The history of Xerox begins in 1906 with a small photography paper business in Rochester, New York. The Haloid Company, as it was called back then, was sold to a Rochester businessman named Gilbert E. Mosher for a modest \$50,000. While Mosher became president, he left the day-to-day affairs to the company's founders.

Xerox has now unveiled a new television advert “led by a contemporary twist on a beloved commercial” to “usher in its next chapter”, with the advert describing the OEM’s “focused direction to innovate the way organisations of all sizes communicate, connect and work”. The advert harks back to its ‘Brother Dominic’ advert that was produced 40 years ago “in one of the most famous Super Bowl advertisements of all time”, but Xerox pointed out that “much has changed”.

In the bestselling tradition of *The Soul of a New Machine*, *Dealers of Lightning* is a fascinating journey of intellectual creation. In the 1970s and '80s, Xerox Corporation brought together a brain-trust of engineering geniuses, a group of computer eccentrics dubbed PARC. This brilliant group created several monumental innovations that triggered a technological revolution, including the first personal computer, the laser printer, and the graphical interface (one of the main precursors of the Internet), only to see these breakthroughs rejected by the corporation. Yet, instead of giving up, these determined inventors turned their ideas into empires that radically altered contemporary life and changed the world. Based on extensive interviews with the scientists, engineers, administrators, and executives who lived the story, this riveting chronicle details PARC's humble beginnings through its triumph as a hothouse for ideas, and shows why Xerox was never able to grasp, and ultimately exploit, the cutting-edge innovations PARC delivered. *Dealers of Lightning* offers an unprecedented look at the ideas, the inventions, and the individuals that propelled Xerox PARC to the frontier of technohistory--and the corporate machinations that almost prevented it from achieving

This book explores the history of hypertext, an influential concept that forms the underlying structure of the World Wide Web and innumerable software applications. Barnet combines an analysis of contemporary literature with her exclusive interviews with those at the forefront of the hypertext innovation. She tells both the human and the technological story, tracing its path back to an analogue device imagined by Vannevar Bush in 1945, before modern computing had happened. 'Memory Machines' offers an expansive record of hypertext over the last 60 years, pinpointing the major breakthroughs and fundamental flaws in its evolution. Barnet argues that some of the earliest hypertext systems were more richly connected and in some respects more flexible than the Web; this is also a fascinating account of the paths not taken. Barnet ends the journey through computing history at the birth of mass domesticated hypertext, at the point that it grew out of the university labs and into the Web. And yet she suggests that hypertext may not have completed its evolutionary story, and may still have the capacity to become something different, something much better than it is today.

Rose Gottemoeller, the US chief negotiator of the New START treaty-and the first woman to lead a major nuclear arms negotiation-delivers in this book an invaluable insider's account of the negotiations between the US and Russian delegations in Geneva in 2009 and 2010. It also examines the crucially important discussions about the treaty between President Barack Obama and President Dmitry Medvedev, and it describes the tough negotiations Gottemoeller and her team went through to gain the support of the Senate for the treaty. And importantly, at a time when the US Congress stands deeply divided, it tells the story of how, in a previous time of partisan division, Republicans and Democrats came together to ratify a treaty to safeguard the future of all Americans. Rose Gottemoeller is uniquely qualified to write this book, bringing to the task not only many years of high-level experience in creating and enacting US policy on arms control and compliance but also a profound understanding of the broader politico-military context from her time as NATO Deputy Secretary General. Thanks to her years working with Russians, including as Director of the Carnegie Moscow Center, she provides rare insights into the actions of the Russian delegation-and the dynamics between Medvedev and then-Prime Minister Vladimir Putin. Her encyclopedic recall of the events and astute ability to analyze objectively, while laying out her own thoughts and

feelings at the time, make this both an invaluable document of record—and a fascinating story. In conveying the sense of excitement and satisfaction in delivering an innovative arms control instrument for the American people and by laying out the lessons Gottemoeller and her colleagues learned, this book will serve as an inspiration for the next generation of negotiators, as a road map for them as they learn and practice their trade, and as a blueprint to inform the shaping and ratification of future treaties. This book is in the Rapid Communications in Conflict and Security (RCCS) Series (General Editor: Dr. Geoffrey R.H. Burn) and has received much praise, including: “As advances in technology usher in a new age of weaponry, future negotiators would benefit from reading Rose Gottemoeller’s memoir of the process leading to the most significant arms control agreement of recent decades.” —Henry Kissinger, former U.S. Secretary of State “Rose Gottemoeller’s book on the New START negotiations is the definitive book on this treaty or indeed, any of the nuclear treaties with the Soviet Union or Russia. These treaties played a key role in keeping the hostility between the United States and the Soviet Union from breaking out into a civilization-ending war. But her story of the New START negotiation is no dry academic treatise. She tells with wit and charm the human story of the negotiators, as well as the critical issues involved. Rose’s book is an important and well-told story about

–William J. Perry, former U.S. Secretary of Defense “This book is important, but not just because it tells you about a very significant past, but also because it helps you understand the future.” – George Shultz, former U.S. Secretary of State

This book provides the reader with inside knowledge about the application and workability of the concept of benchmarking in different industrial contexts. will say Xerox. Fifteen years after it invented personal computing, Xerox still means "copy." *Fumbling the Future* tells how one of America's leading corporations invented the technology for one of the fastest-growing products of recent times, then miscalculated and mishandled the opportunity to fully exploit it. It is a classic story of how innovation can fare within large corporate structures, the real-life odyssey of what can happen to an idea as it travels from inspiration to implementation. More than anything, *Fumbling the Future* is a tale of human beings whose talents, hopes, fears, habits, and prejudices determine the fate of our largest organizations and of our best ideas. In an era in which technological creativity and economic change are so critical to the competitiveness of the American economy, *Fumbling the Future* is a parable for our times.

Covering all the core elements that business students need to know about the economic dimension of strategy, this text offers a fresh approach by also placing strategy in its social, political, and organizational context. Students are introduced to the links between strategic management and strategizing processes on the one hand and organizational politics and power relations on the other. The book
